

# Operating Instructions

## Summary

Daycare is a teacher-student information management system, students and teachers can enter different operation interfaces. For students, they can register and view their information. For teachers, they have four operation sections, students management, teachers management, classroom management and immunization management.

## Part 1 Student

### Register

Fill in student information after clicking the registration button on the main interface, where Name, Age, Father and Mother are required fields. If not filled in completely, the system will give a pop-up window. Then fill in the date of vaccination, if not filled in completely, the system will give a pop-up window.

After filling in the information, the system will assign an ID for you to log in.

### Log in

If the entered ID does not exist, the system will give a pop-up window. After logging in, the system will display student information. Click “Back” button to return to the login interface.

## Part 2 Teacher

### Register

Fill in teacher information after clicking the registration button on the main interface, where First Name, Last Name, Classroom ID and Password. If not filled in completely, the system will give a pop-up window.

### Log in

When registering, teacher should fill in her ID and password. If she makes a mistake, the system will give a pop-up window.

## Student management

Fill in Student ID to search information about this student. If the ID does not exist, the system will give a pop-up window. You can also change some information in this page by clicking “Renewal”.

## Teacher management

The system will show information about class and students. Click “Back” button to return and click “Log out” back to teacher log in interface.

## Classroom management

You can see all the information about classrooms here, if you want to know which students belong to this classroom, select the classroom and click button “Enter”.

## Immunization management

At here, the system will help the teacher find those children who need to be vaccinated, and output their names and ids for the teacher to find out further. Then fill in student ID, the system will load a comprehensive immunization list of a student. Also, teachers may change the date after clicking button “Finish”.
